Environmental assessment (EA) is the assessment of the environmental consequences of a plan, policy, program, or actual projects prior to the decision to move forward with the proposed action. In this context, the term "environmental impact assessment" (EIA) is usually used when applied to actual projects by individuals or companies and the term "strategic environmental assessment" (SEA ...

Overall, there is increased recognition of the value of impact assessment methods that link sectors and disciplines more inclusively. The assessment of linked health and environmental impacts can play a significant role in expanding the narrow focus and frequent shortcomings of sectoral assessment. It also ensures that the direct contributions of ecosystems to better health are duly captured ...

A substantial portion of the work of modeling yield for the purpose of climate change impact assessment relies on deterministic, biophysical crop models (e.g. Rosenzweig et al 2013). These models are based on detailed representations of plant physiology and remain important, particularly for assessing response mechanisms and adaptation options (Ciscar et al 2018 ).
