With this recent history in mind,
philosophers of molecular biology
have examined the key concepts of
the field: mechanism, information,
and gene. Moreover, molecular
biology has provided cases for
addressing more general issues in
the philosophy of science, such as
reduction, explanation,
extrapolation, and experimentation.

The central dogma of molecular biology describes the flow of information from DNA through RNA into proteins. This flow of information is called gene expression. It occurs through two main processes: transcription and translation. Transcription is the synthesis of an RNA molecule that contains the coding sequence of a gene.
