With respect to human physiology, oxygen transport can be divided into that occurring through convection and that occurring by diffusion. In this context, convection describes the movement of oxygen within the circulation, occurring through bulk transport. This is an active process requiring energy, in this case derived from the pumping of the heart. On the other hand, diffusion describes the ...

Oxygen is a colorless, odorless, tasteless gas that is utilized by the body for respiration. Oxygen has played a major role in respiratory care. Oxygen therapy is useful in treating hypoxemia but is often thought of as a benign therapy. After many years of study, we have learned a great deal of the benefits and potential risk of this powerful drug.

L'apparato respiratorio è una struttura anatomica adatta alla respirazione, presente sia nelle piante che negli animali. Negli animali terrestri la superficie respiratoria è situata all'interno, ed è costituita, in particolare modo nei tetrapodi, dalle vie aeree, dai polmoni e da eventuali annessi come i sacchi aeriferi. L'apparato respiratorio permette gli scambi gassosi di ossigeno ed ...
